

## **Delusions about global temperature and climate change.**

**The claim that global warming is caused by human emissions is clearly wrong!** About 96% of the emissions are natural!

**The claim that CO<sub>2</sub> in the atmosphere controls global temperature is clearly wrong!**

There is so little CO<sub>2</sub> in the atmosphere that an impact on global temperature is not observable. Neither in the short nor the long term.

**The claim that an increased amount of CO<sub>2</sub> in the atmosphere causes global warming is wrong!** CO<sub>2</sub> does not hold back energy. More CO<sub>2</sub> in the atmosphere increases cooling!

**The claim that the development for the worse is accelerating is wrong!** The development of global temperature has been linear over the past 45 years. There is no accelerating development, no extreme global warming.

It will not help to switch to a Conservative government, they suffer from the same delusions about CO<sub>2</sub> and climate!

**There is no scientist who can dispute this!**

Sources: This is based on publicly available measurements of CO<sub>2</sub> in the atmosphere and global temperature. The laws of physics and thermodynamics apply. Energy is emitted from hot to cold, never the other way around. This controls the processes in the climate system. Controls the departure of energy received from the sun, i.e. the cooling. CO<sub>2</sub> cools best!
