

Dette skriver dr. Roy Spencer på nettsiden sin om global oppvarming.

Global warming” refers to the global-average temperature increase that has been observed over the last one hundred years or more. But to many politicians and the public, the term carries the implication that mankind is responsible for that warming. This website describes evidence from my group’s government-funded research that suggests **global warming is mostly natural**, and that the climate system **is quite insensitive to humanity’s greenhouse gas emissions** and aerosol pollution.

Denne nettsiden beskriver bevis fra min gruppes regjeringsfinansierte forskning som antyder at global oppvarming stort sett er naturlig, og at klimasystemet er ganske ufølsomt for menneskehetens klimagassutslipp og aerosolforurensning.
